Statistical Appendix

Changes in data since May 2010

Revised insurance market figures reflect that premium growth was higher than previously reported.

The data appendix has been updated to incorporate the latest available data. For most markets, definitive or at least provisional figures are now available.

Compared with the data compiled for *sigma* in May 2010, global life insurance premium volume for 2009 was revised upwards by 1.2% (USD 27bn). Global non-life insurance premiums were revised by 0.4% (USD 8bn).

While the main message from earlier in the year – ie total premium volume fell in real terms - is still valid, the decline is less severe than previously reported.

- In non-life, premiums for 2009 are now estimated to have grown marginally at 0.4%, mainly due to upwards revisions in a selection of large markets - eg the UK, Germany and Japan.
- In life, the decline of premiums in the US was somewhat less severe than estimated in the spring. The updated figures show a decline of 1.3%, slightly better than the previously reported figure of -14.6%. In Europe and Japan, growth is somewhat higher than previously estimated. According to the latest estimates, global premiums in the life segment are only slightly negative at -0.8%, versus the previously reported figure of -2.0%.
- Growth in many emerging markets has also been revised upwards, underlining the resilience of emerging markets.

The revised growth rates are also partly due to a basis effect, since growth and premium volume for 2008 were revised slightly downwards due to data revisions by primary sources.
